■ Introduction

OVERVIEW

Datastream gives you access to the world's largest and most respected historical financial numerical database. Datastream provides a range of charting and reporting tools that enable you to manipulate and display, or simply download that data in the way that you want. With Datastream you can also get a set of Microsoft Office add-ins that enable you to access the Datastream database directly from within Excel, Word, or PowerPoint - create and embed data requests that put the data you want straight into your spreadsheet, document, or presentation.

DATASTREAM'S DATA COVERAGE

Unrivalled depth and breadth of coverage across the full range of instrument types means immediate access to the data you need. Worldwide equity coverage direct from the stock markets, comprehensive market indices, economics data direct from national government sources as well as the OECD and IMF, fixed income securities and associated indices, commodities and derivatives data. Forecast earnings data from IBES, fundamental data from Worldscope and added value data sets from respected sources such as MSCI, DJ Stoxx and FTSE All World. And all data is quality checked and actively maintained by dedicated staff.

MAKING A REQUEST

To make chart, report, and data format requests, follow this sequence of steps to select the data you require:

Select the type of series you want from the Data Category window- - holding the mouse over the data category will display quick links to Navigator.

See Selecting a data category, page 14.
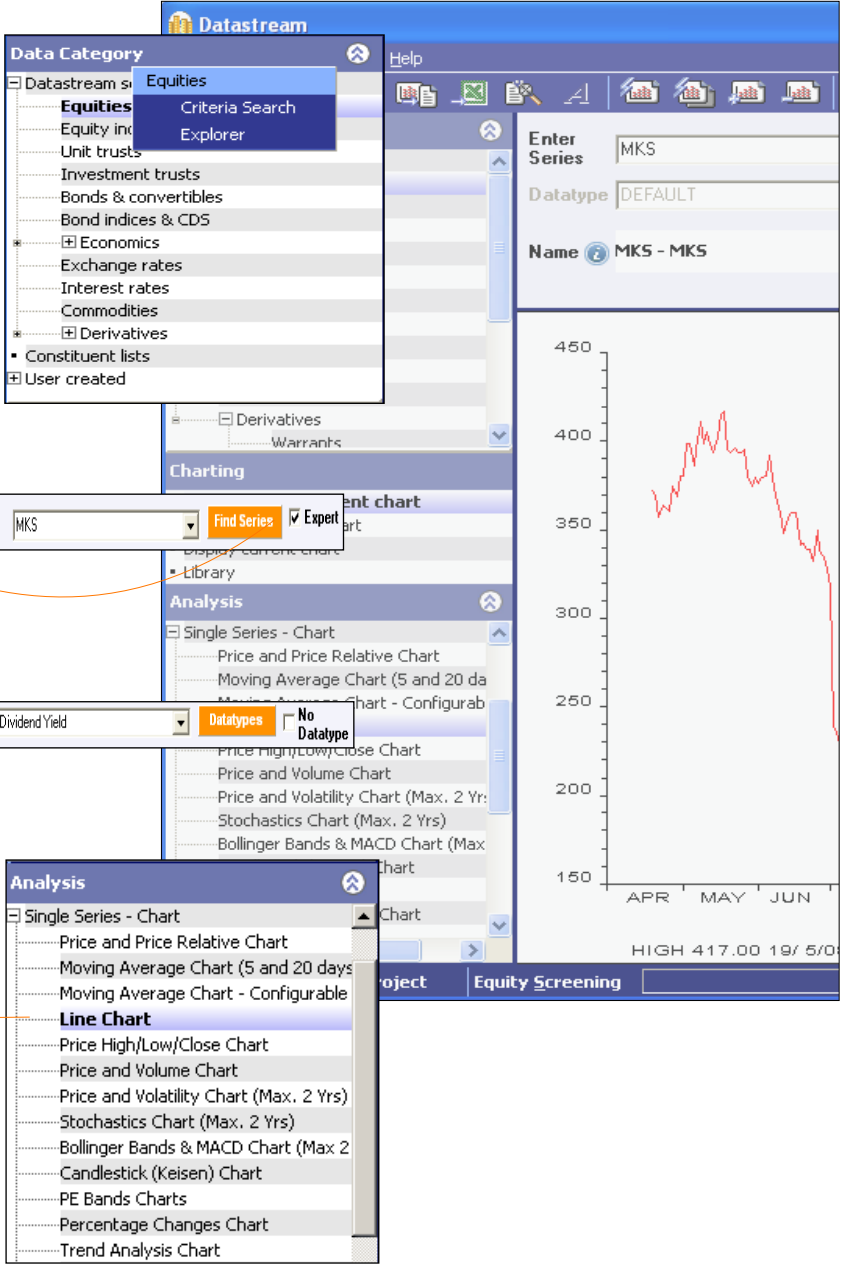

Find and select your series.
- Click the Series navigation button to open Navigator.
- Check the Expert entry box and type the exact mnemonic or code in the Series field.
See Selecting the series, page 15.

Select a datatype (optional).
You can:
- Click the Datatype Navigation button to open Navigator.
See Datatypes, page 24.

Select the type of request.

Select a request type tab. For example, a single chart.
Select the type of chart, report or data format from the list displayed.

See Selecting types of request, page 20.

12

You can also make additional graph layout and data settings for some requests using the **Settings** button. See Settings, Datastream Help.

Refine your request.
Change the display period, select a relative date option or click the **Date** button.
See Dates, page 22.
Change the currency, click the **Currency** drop down box.
See Currency, page 26.

Run your request.
Click the **Run Now** button.
You can create a project and use the Schedule Night Shift Facility to run your project at a later date. You can save the parameters as a Favourite to save you time setting up the details again.

See Making your request, page 27.
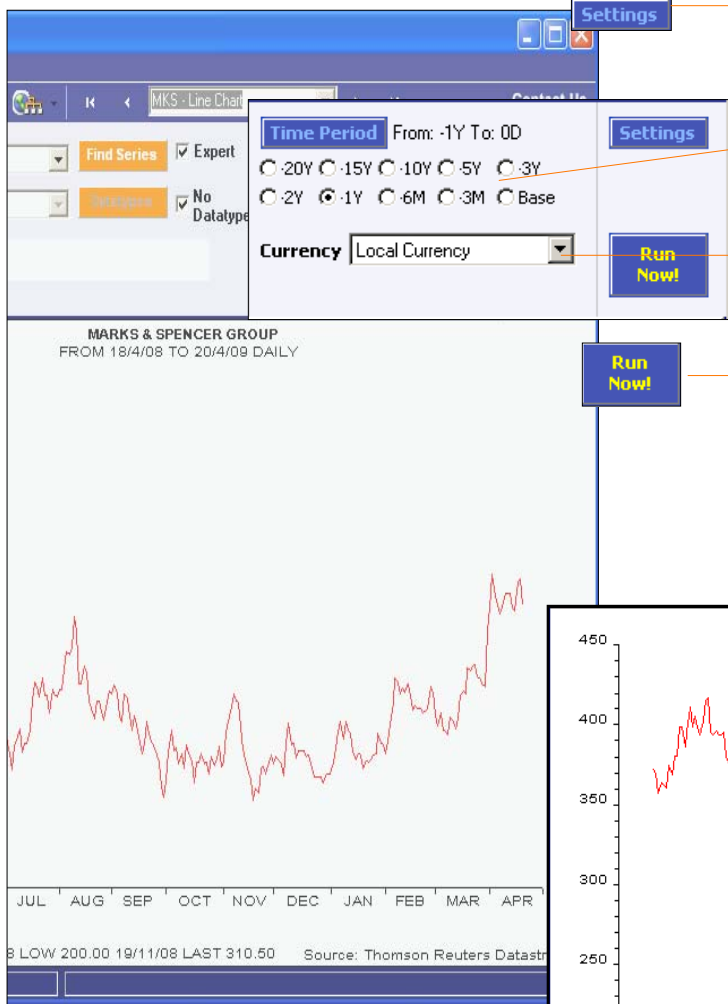

View your results.
You can Print, Export, or Copy the results of your request, and for a data request, transfer the data to your spreadsheet for future refreshing within Excel.
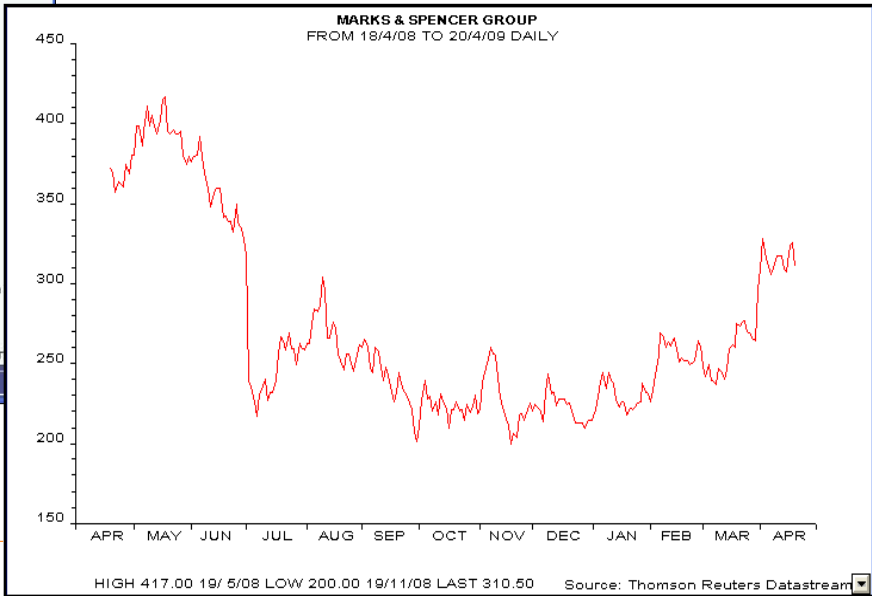

To locate the series you want, you can use: the **Find** field, see Using Find, page 16; the Filter, see Using the Filter, page 18; and Equity Search, see the Datastream Help.

SELECTING A DATA CATEGORY

Datastream series codes are stored in a database and are accessed using Datastream Navigator. The series are grouped into 17 data categories, which are selected from the Category drop down list. Selecting a data category gives you access to all the series within that category.
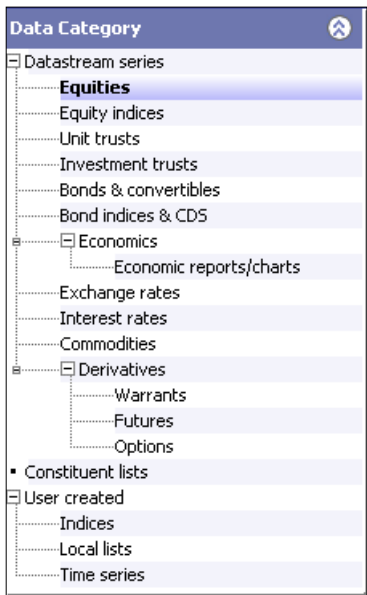

You can select:

Equities
Equity indices
Unit Trusts
Investment Trusts
Bonds and convertibles
Bond indices & CDS
Economic reports and charts
Exchange Rates
Interest Rates
Commodities
Warrants
Futures
Options
Constituent lists
User created Indices

SELECTING THE SERIES

Use Datastream Navigator to find and select the series you want, or if you know the Datastream mnemonic or code, SEDOL, ISIN, or other Datastream supported code, check the Expert entry check box and type the mnemonic or code in the Series field to select your series.

Expert entry:

Enter part of the name for the required series
Click the Search button to open the Datastream Navigator.

Click the drop down button to view and select recent 12 series

Check the **Expert entry** box and type the exact mnemonic or code or Datastream function or expression directly in the **Series** field.

TO SELECT A SERIES:

- Click the **Series navigation** button to find and select your series from Datastream Navigator.
- To view recent series use the drop down to select from the last 12 series used.
- Check the **Expert entry** box and type the mnemonic or code in the **Series** field.

You can also use the Datastream Help Browser.

USING DATASTREAM NAVIGATOR - SERIES SEARCH

Series search is the most basic search. Use this to search by the name, DS mnemonic, DS code, SEDOL, ISIN, local code, or IBES ticker of the series you are looking for. Alternatively you can use the 'Explorer' hierarchies to drill down to the series (or the 'Help browse' pages that provide access to the datatypes available for the series).

TO FIND AND SELECT A SERIES USING SET CRITERIA PAGE:

Click the **Search** button to open **Datastream Navigator**.

1

Click the **Series Search** button if it is not already selected.

2

You can add a second criteria of search

Click the **Search** button.

REQUEST TYPES

Single Series - Overview - You can request Datastream company, commodity, warrant, trust, and bond performance overviews, and a range of fixed format IBES forecast overviews.

Multiple Series / Flexible Chart - You can display information on multiple series, enabling you to create comparisons across different data category types, and use flexible charts for multiple chart requests. For example, you can compare an equity with an index such as the CAC40 and with an economic series such as the RPI.

Single Series - Chart - You can request any of the standard Datastream graphics, including Line, Moving Average, Stochastics, High-Low-Close, Candlesticks, and Bollinger Bands.

Single Series - Report - You can select from a range of pre-formatted report types including Profit & Loss, Dividend & Earnings, Key Accounts Ratio, and Company Profiles.

Single Series - Data - You can download time series, static, and company accounts data, which you can export or transfer to your spreadsheet.

Codes and Information - You can use the Remote Search as an alternative way to find codes for active and dead equities, unit, investment trusts, bonds, warrants and convertibles. There is also an option to set Datastream to run requests and update projects in English, French and German.

Favourites - You can save frequently used projects as **Favourites** so that next time you can run the request quickly.

Equity Screening - search the Datastream global equity universe for companies that match your chosen criteria.

DATES

Each data category has a default date range. You can choose your own from four display period options:

- Fixed start and end dates - a fixed period. For example, the whole of last year.
- Relative start and end dates - a fixed period relative to today's date.
- Datastream base date - a period starting with the date of the earliest data available on the database for a series.
- Today - a period ending with the latest available price or value.
  Intra-day prices are available for many markets. To receive the latest intra-day price or value, you must subscribe to the intra-day service.

Datastream enables you to combine these start and end date options.

DATATYPES

The datatype defines the type of data. For example, the default datatype for equities is Price (Adjusted).

For some data categories and report/chart types, you can select the datatype. For example, for an Equity line chart request you can change from the default Price (Adjusted) datatype to Market Value.

When the Datatype navigation button is enabled, click to display the datatypes available for your data category.

Datatypes are grouped by their type; for example, Datastream IBES datatypes, MSCI datatypes, and Worldscope data items.

To select a datatype:

CURRENCY

You can select which currency you want to display your results in.

Click the **Currency** drop down list and select a currency from the list displayed.

Note:

The parameters that you can change are dependent on the data category and chart, report, or data format chosen. For example, you can change the date, datatype, and currency for an Equity - Line Chart request, but only the date for a Constituent - Bar Chart request. If you cannot change the currency, the currency option is greyed out.

MAKING YOUR REQUEST

Once you have selected the criteria for your request and made your display date, datatype, and currency adjustments, you can make your request:

Run Now:

Request the report, chart, or data straight away.

This connects you to Datastream and displays the result. You can change the request criteria and click the button again, or save the request for future use.

Note -

Double clicking on the request in the Explorer hierarchy will also run the request.

Add New Request:

Add the request to the open Project to refresh later.

This does not connect you to Datastream, but stores the request in the open Project. This enables you to work off line and send all your requests at the time of your choice.

Please see *Using Projects, Datastream Help.*

Using your results

■ Using your results

When you request reports, charts, and data formats from Datastream, they are displayed within Datastream and are automatically added to the current open Project. You can:

■ Print your charts and selected pages of reports through any Windows printer.

■ Copy reports, charts, and data formats to the Windows clipboard for further use in Windows applications.

■ Export reports, charts, and data in a variety of formats for use with other applications such as word processors.

■ Transfer data to Microsoft Excel. Data downloaded from Datastream can be transferred to spreadsheet for regular updating.

■ Transfer charts to Microsoft Office applications like Excel, Word, and PowerPoint. You can transfer your chart requests directly into these applications as embedded, dynamic objects. Once embedded, the requests can be refreshed, and within Excel and PowerPoint - you can right click on the chart to re-edit the chart in Datastream - then transfer it back, with any edits, to Excel and PowerPoint.

PRINTING REPORTS, CHARTS, AND DATA

You can print any displayed report, chart, or data format through the default Windows printer, (in addition you can print a set of charts with several charts on page using the Print Project (Chart Layout) option).

To print your report, chart, or data:

■ Select **Print** from the **File** menu,
OR
click the **Print Current Request** button to print the request displayed.

To change the printer or printer settings, select **Print Setup** for either Report or Chart from the **File** menu.

COPYING REPORTS, CHARTS, AND DATA

You can copy the displayed report, chart, or data format to the clipboard and paste it into other Windows applications.

TO COPY A REPORT:

1   Select the area to be copied; this can be:
   - A range of cells - click the left mouse button and drag the cursor over the display area to define the cell area to be copied.
   - The whole report (default) - the whole report is selected automatically when it is displayed.
2   Select **Copy** from the **Edit** menu.

Note:

The report text will be held on the clipboard in text format with TAB formatting, but without font and text formatting.

TO COPY A CHART:

■   Select **Copy** from the **Edit** menu.

Note:

The chart will be held on the clipboard as a Windows Meta File.

33
TRANSFERRING CHARTS TO MS OFFICE

Chart requests can be transferred directly into Excel, Word, and PowerPoint as refreshable objects.

TO TRANSFER A CHART REQUEST TO MS OFFICE:

1 Select **Transfer to Excel** (Word, PowerPoint) from the **Tools** menu. Excel (Word, PowerPoint) is opened with a new worksheet (document, slide). Your chart is displayed.
2 You can display the chart:
   - as a single element
     OR
   - as an Office Picture - right click and select **Display as Office Picture**. This gives you the Office Picture format options.

Note:

To display the chart as transparent, right click over the Refresh button and de-select Display original background (the chart format must be as an Office Picture). To re-edit a chart once transferred to Excel or PowerPoint - right click on the chart and select the Edit Chart option.

You can use the right click menu to transfer and export.

Refresh	12/31/2004			
Type	P	PE	DY	CURRENCY
U:PEP	52.2	21.9	1.76	U$
U:KO	41.64	22.1	2.4	U$

Time series requests
To request data over a specific period, defined by a start date, end date, and frequency of data.

For example, the daily price for Pepsico from 01/01/05 to 01/01/06

Refresh	12/31/2004					
End	12/30/2005

Worked examples

CREATING DATASTREAM LISTS

Lists are a good way to make report, chart, and data requests for group of series that you use frequently. Instead of making individual requests, you can make one request to get results of all the series you are interested in. Once you have created your lists, you can edit them to reflect any changes in the group of series. You can use the Request or Project screens to refresh your lists in Datastream, or the Request Manager to refresh them in AFO.

This worked example shows you how to create a list of series. For more information about lists and what you can do with them, see the *Datastream Help*.

More...

DATASTREAM LISTS

Datastream provides flexibility in creating lists of series, such as a portfolio, a watch list, or a set of related indicators. One can analyse the series as a set or individually. Lists are a convenient way to make report, chart, and data requests using multiple series. One can create copies of Datastream's index constituent lists, remove unwanted series, reorder the list, or merge two lists to create one. The List Wizard takes you through the process effortlessly.

Online help: Select **Help >Contents >Using Datastream >Local Lists**,
OR
Click the **Help** button on the list wizard dialog box.

EXPRESSIONS AND FUNCTIONS

Datastream's expression picker gives you access to over 50 standard functions and expressions, which one can use to form part of one's chart, report, or data requests. For example, find the percentage change in share price over 12 months.

Datastream's expression builder enables one to create and edit one's own expressions, which one can keep and access through the expression picker for future use.

Online help: Select **Help >Contents >Using Datastream >Expressions and functions**,
OR
Click the **Help** button on the expression picker, or expression builder dialog boxes.

USER CREATED INDICES

The UCI Manager enables you to create and maintain your own indices. Each index is based on a list of constituent series, which you specify as the first step of creating an index. Once created, an index can be automatically maintained for you, with new values calculated daily.

Online help: Select **Help >Contents >Using Datastream >User Created Indices**

USER CREATED TIME SERIES

A user time series is a series of values (data) for different points in time created by you and uploaded for storage on Datastream. The values can be daily, weekly, monthly, quarterly, or yearly and you can save the series in management groups to help you organise them. You can use these series in Datastream and AFO charts and reports. You can combine them with Datastream maintained series and use functions and expressions to manipulate them. An Excel template is used to create and edit your time series. You can download an existing series to form the basis of a new one.
